São Carlos - SP, Brazil, 14/09/2026.

To whom it may concern

I am pleased to recommend Mr. **Subar Mahdi**, who undertook a robotics internship at USP Center for Robotics — CRob in São Carlos, Brazil, from June to September 2026.

During his internship, Mr. Mahdi gained practical experience across mechanical design, physical prototyping and interaction with robotic platforms in a research laboratory. His work included developing a simplified manual two-jaw gripper using Fusion 360 and 3D printing, progressing through CAD modelling and two physical prototype versions. This involved considering how component geometry, assembly and mechanical movement translate from a digital model into a physical mechanism.

Alongside this project, he participated in hands-on robot interaction and gained introductory exposure to the laboratory's robotics workflows, including ROS 2 and NVIDIA Isaac. These experiences broadened his understanding of how mechanical hardware, robot operation, software communication and simulation contribute to robotic systems.

Mr. Mahdi demonstrated curiosity, initiative and a willingness to engage with unfamiliar engineering problems. He approached practical work thoughtfully, sought to understand the reasoning behind technical decisions and showed a commitment to developing his knowledge through experience. His willingness to work across mechanical design and the wider robotics environment reflected a multidisciplinary interest in engineering.

Completing an internship in an international research environment also required adaptability and openness to different working practices. He embraced the opportunity to learn from those around him and connect his own project work with the broader activities of the laboratory.

I believe Mr. Subar Mahdi would bring a motivated, practical and thoughtful approach to a professional engineering team. His initiative, willingness to learn and interest in understanding complete systems provide a strong foundation for continued development.

I am pleased to recommend him for employment, engineering placements and other professional or research opportunities. Please feel free to contact me should you require further information.

Yours faithfully,

Marcelo Becker
Associate Professor
